

StaffingLogic Solution Development

StaffingLogic combines business consulting and process engineering practices with rules-based automation software to create superior systems for labor sourcing and acquisition, payment processing, and vendor quality control, among other functions.

StaffingLogic leverages innovative tools and techniques to analyze needs, chart business requirements, and engineer customized staff acquisition and management systems. We also manage comprehensive integration plans to assimilate the system into the client's business environment. Total solution development time – from initial discovery to launch, ranges from 60 to 90 days for most organizations.

STAFFINGLOGIC SOLUTION DEVELOPMENT PROCESS

The StaffingLogic **Solution Development Process** provides progressive decision support through the four stages of the process and culminates with a customized **Proof of Concept** business model that validates system functionality, serviceability, and compatibility.
